

Hybrid Aerobic Development Plan

Base → Threshold → VO₂Max (12 Weeks)

FTP: 260 W • Threshold Pace: 4:45/km

Update \currentFTP and \currentCS — all watts and paces recompute.

8	RECOVERY WEEK — Self-Managed + FTP/TP Retest						

Phase 3 — VO2Max: Block Periodization (Weeks 9–12)

W9 is a 5-session HIT block: no long ride, running cut to one easy 6 km. W10–11 carry one HIT/week with full LIT volume returned — this is when the delayed adaptation surfaces. W12 recovery captures the supercompensation; retest at the END of W12, not the start. Interval format: alternating 6x5' and 5x6', all-out for highest mean power, 2.5'/3' recovery. Source: Rønnestad, Hansen & Ellefsen, Scand J Med Sci Sports (2012).
